1. "The following information on Walbrzych (German: Waldenburg) dates up to the end of 1953:

Population

2. "Walbrzych, which was damaged neither during World War II nor during the Soviet occupation, now has a population twice as large as before the war. In contrast to the 65,000 in 1939, Walbrzych now has over 120,000 inhabitants. The majority of the inhabitants fall into one of the two following groups: (1) the resettled Poles from the oil-basin in the Drochobycz [Drogozbich?]-Boryslaw area, and (2) the repatriates from the coal basin in northern France. In addition, around 15,000 Germans are still living in Walbrzych. Also, there are several thousand gypsies who have been forced to accept permanent jobs. Several hundred [Gypsies?] are now employed in the metalurgical industry in and around Walbrzych.

Industrial Background

3. "The town has a good industrial tradition. By the 14th Century, silver and lead had been excavated in this area. A flourishing textile industry then developed, which was killed in the 18th Century by competition from the mechanized production in other areas. Thereupon, Walbrzych returned to mining, and, although the coal mines were opened up relatively late, the town played an important role in Silesian coal production. It was discovered that the kind of coal obtainable in Walbrzych was excellent for coal-production and also for other chemical reprocessing phases. Glass and china manufacture developed along with the coal industry.

Present Industrial Importance

4. "At present, the main branches of Walbrzych's industrial life are:
(a) coal and coke, the source of electric and gas power. One of the largest power

plants is connected with the 'Victoria' coal mine. The power from this plant is supplied even to such distant places as Prague and west to the area around Goerlitz in East Germany. Gas pipelines cover all of Lower Silesia, extending in the east to as far as Wroclaw and in the west to the Goerlitz area.

- (b) to some lesser extent, glass and china manufacture. However, almost since the East-West trade resulted in the loss of many markets, production suffered. Walbrzych's glass industry. Also, some large enterprises opened up plants elsewhere as, for instance, Rosenthal, which used to have a large factory in Walbrzych. Rosenthal opened up a new plant in the German Federal Republic, which took away many old customers from Walbrzych.

City Plan of Walbrzych

5. "I have prepared a large town map of Walbrzych, drawn to a scale of 1:10,000. The aforementioned map is available at the CIA Map Library, together with a list giving the coordinates for locating city streets."

Legend for Map

6. "The following legend applies to the map of Walbrzych. Objects shown on the map include public utilities, administrative and security institutions, political institutions, coal mining institutions, trade and banking institutions, hotels and restaurants, cultural institutions, churches, hospitals, plants and mines, and military installations.

No.	Object	Location on Plan	Remarks
<u>(A) Public Utilities</u>			
1	Walbrzych-Miasto railway station	E-2	The town of Walbrzych straddles downhill for many miles. There are four railway stations. Each of these stations serves in both a passenger and freight capacity in order to take care of the transportation requirements of the adjacent coal mines and industrial plants. For example, the Walbrzych-Miasto line has extra facilities for loading glass and china. The bypass, which before World War II, went around the town, is now out of operation. It was completely electrified. The Soviet Occupation authorities 'evacuated' this line, and up to now it has not been re-established.
2	Walbrzych-Fabryczny <u>not</u> in NIS Gazetteer for Poland railway station	D-6	Located near the 'Victoria' coal mine and also adapted to loading coal and coke.
3	Walbrzych-Dworzec Główny <u>not</u> in NIS Gazetteer railway station	E-8	Located near the center of town and regarded as the main railway station. Equipped with special installations for repairing engines.
4	Walbrzych-Szczawienko railway station	<u>not on map</u>	In the northern outskirts of town. Not included on map. Equipped with railway car repair-shops.
5	Freight-yard near Dworzec Główny station	D/E-7/8	None.
5a	Freight-yard	D-6	Near the Chrobrego coal mine; specially adapted for loading coal and coke.
